The Cause of Inflation: The Solution to Prevent the Collapse of Society.

Andrew Lehti

15 pages / empty space / **4 minute read**

Synopsis: so, you'd like to know what's causing inflation, but you don't know what? Everyone was fooled into thinking that property values rise. Absurd. Truly.

However, this is the truth of our current situation and there is only one way to prevent everyone from losing their houses, the banks closing, the stock markets being wiped out. You can go ahead and do the thing you do every crash, but it won't work this time.

Furthermore, this is how the world population figures were incorrectly calculated by students at MIT and OXFORD. In their ignorance, they believe that an annual decline in growth is a bad thing. Elon Musk and everyone at the United Nations believe such nonsense, too.

There has been a 5.4% annual growth in property values since 1960. That's naive, to say the least. Honestly, it is. What I'm saying is that. Even if you don't do anything, the value of your house will increase. It's very amazing.

Andrew Lehti

1 The Sole Cause of Inflation is Property Appreciation.

Consequently, this increase that occurs once per year is dangerous, and that it's caused a major crash once every hundred years since it began. There are always a few crashes beforehand. This is because it is quite substantial.

A $500,000 house appreciating at a 5.4% annual pace is greedy and irresponsible: Let's look at groups of 20 years.

The first year we will see is year 2, followed by 20.

Table 1

$527,000	**2**
$1,358,131	**20**
$3,888,247	**40**
$11,131,817	**60**
$31,869,721	**80**
$91,241,093	**100**
$261,217,759	**120**
$747,850,720	**140**
$2,141,051,598	**160**
$6,129,701,855	**180**
$17,548,967,463	**200**
$50,241,637,569	**220**
$143,838,784,301	**240**
$411,801,781,751	**260**
$1,178,963,714,675	**280**
$3,375,302,152,918	**300**
$9,663,286,903,310	**320**
$27,665,408,767,907	**340**
$79,204,400,112,886	**360**
$226,757,430,185,511	**380**
$649,192,874,020,279	**400**
$1,858,600,123,197,370	**420**
$5,321,060,282,989,770	**440**
$15,233,875,313,912,500	**460**
$43,613,668,091,998,600	**480**
$124,863,306,627,031,000	**500**

By year 500, the cost of the house is now **249,**726,**613,**254x more than it was initially. This means it appreciated an average of **$249,**726**,613,**254**,062**; yep, far more money than all our money and credit put together multiplied by 5.

So, how do you prevent it? Stop appreciating property immediately. Give every single citizen a UBI of $3400 per month regardless of whether they work. Lock in prices of food, property, etc. right now by scaling UBI with the percentage housing and COL increase; as for decrease. It does not ever decrease.

The inept economic advisers will tell you that this will drive inflation. They have not a clue what they speak about. The Big Mac Index proves this. You can get a Big Mac in some countries for as little as $1.50USD, while in others, it can be up to $8USD. This index was supposed to reconcile the illusion that global trade adheres to expenditure. It does not. In fact, we'd never be able to fully keep track of all the money at once.

If I added $500,000,000,000 dollars into the market right now and spread, it evenly. No one would have any idea that $500 billion dollars just entered the market. This constant placed onto UBI creates an incentive for the rich and for the producers to never raise their prices, nor lower them. It gives an incentive to housing to never appreciate value. Why? Because if they do. Every single person gets an equal amount back in UBI which does nothing to benefit the UBI recipient but decimates the hoard of value held by the ultra-rich.

If this does not happen. Your values will reconcile. The churches will burn and what we value most will have our support, the internet. News stations will die. Most of the rich will be put to their knees by the largest financial crises ever to exist.

You know. Maybe don't do anything. I kind of like the sound of the latter. Where are the corrected values? How far will everything drop?

The column stating wage, means, the price of the house relative to the average lower middle income.

THE PRICE OF A HOUSE RELATIVE TO THE STANDARD MINIMUM WAGE AND AVERAGE OF THE YEAR

MARKET SHOULD BE		< SHOULD BE	BUT THIS IS US >	OVER-INFLATED VALUE

Fig. 1

We're looking at a drastic 486% correction. Well. I'd get off my ass and do some proper advising to the government before you lose your livelihoods. In other words, everything will lose approximately between 77% to 83% of all its value.

You have three crashes coming otherwise. . .

1800 | 1805 | 1819 | 1825 | 1826

1902 | 1908 | 1920 | 1925 | 1929

2001 | 2007 | 2022 | 2025 | 2026

Fig. 2

What would the minimum wage be had it kept pace with the markets?

We will compare a low, median, upper house along side minimum wage from 1960 to 2028

Table 2:

	low	median	upper	minimum wage
1960	$4,500.00	$11,900.00	$22,500.00	$1.00
1961	$4,743.00	$12,542.60	$23,715.00	$1.05

At the time, it may not appear as if it is exponential, but it appears no one has checked for 300 years. This is also how MIT and Oxford Mathematic graduates screws up the world population. They believed a decline in growth population was bad. It is not. It must happen. They also did not comprehend the baby boom and limited data before that event.

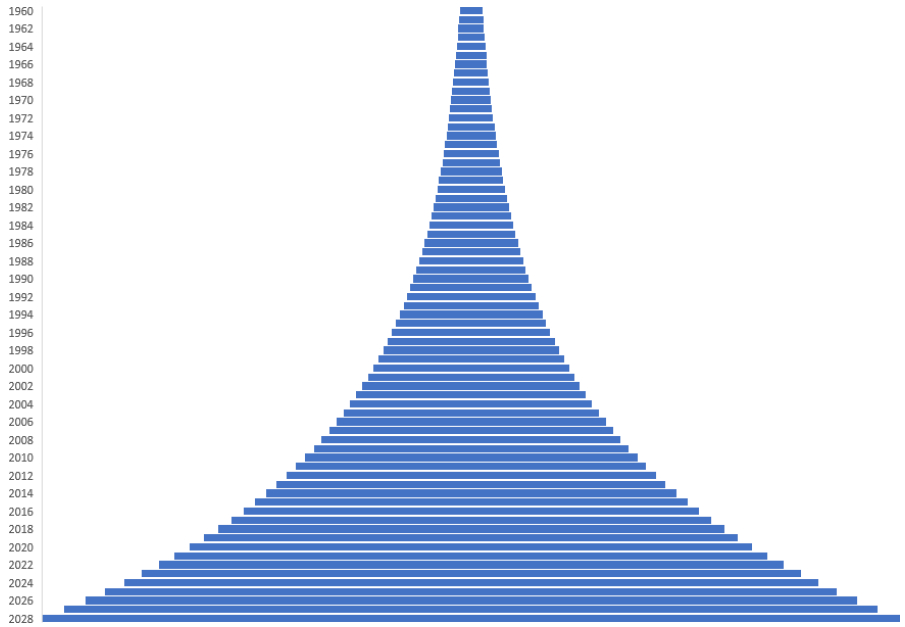

Fig. 3

I warned this back in 2019, 2020, and again a few months ago. Are we just going to keep it a secret? Do we really want you to lose your house, your savings? Seriously. Does anyone remember 2008? Look at how far down 2008 was. I don't care if you lose everything. I am not a materialistic person. I can survive if all goes to hell. It takes very little effort to tell people the cause of inflation; but it is as if you want it to happen. Here's a crazy thing. Do the dumb chain mail thing. Except this time. **It's useful information. The only reason I do this is so that humans can one day hopefully live freely. If there were ever a time to warrant the use of that awful relic method. It is now.**

Send it to three people. Tell them with sincerity to read the entire thing. Statistically, forty percent will oblige.

How fast can we accomplish this? Well. If forty percent of the invites send it to three, and let's say we start with 25 participants, then the experiment will take us. . . 53 generations (as in samples) which could take only a day. It just all depends.

Don't send it to random people. Don't post it to your Facebook. Do not email this. **Just have a conversation.** This is how we can fix our issues.

While the above is all fine. If we were to really take this seriously because it is serious. We can get this done in 18 generations, which could take a mere afternoon.

We have pensions, retirement, housing, businesses, companies all on the line. I find it hard to believe the ones at the top don't know about this. Perhaps they want this to happen to you. Perhaps they programmed you not to help other humans because somehow you think you'll fall behind, but you're only going to fall behind if you do not learn to work together.

Why are economists always baffled by it? They get mad because they didn't catch it. It's because no one questions anything. They just follow orders; and I ironically, I wish for you to follow mine so that we humans can accomplish something for once, **together** without labels.
